Cape laptop - Firefox was running slowly. Updated Java, Acrobat and Quicktime plugins (originally thought to be cause of speed issue). When that did not fix firefox slowdown, researched issue. Known issue with hardware acceleration setting in Firefox (options -> advanced -> general)

Work laptop - Scanned and removed multiple instances of Malware. When logging on Windows would occasionally provide a "Temporary desktop/profile". Lengthy scan of HDD with scandisk showed some errors, but did not fix problem. Created new profile and moved all relevant data to it. Renamed old profile to avoid confusion.
